

Cybersecurity Discovery Piscine

Tyto 02

by @alrodri2

Summary: This exercise is even more interesting... You will have to find where a picture was taken but first you will have to find the picture, maybe Bluesky is not the ideal social media for pictures...

Chapter I

About this Cybersecurity Discovery Piscine

Welcome!

Welcome to this Discovery Piscine in cybersecurity, a challenge where you will dive into the basics of offensive cybersecurity while experiencing the unique educational model of 42. Here, you won't find traditional classes or a single correct solution; learning is collaborative, hands-on, and focused on you.

We invite you to explore the code that powers the software you use every day, while developing skills that go beyond the technical: logical thinking, problem-solving, and self-directed learning. Programming isn't about memorizing rules; it's about creatively assembling blocks to solve problems in your own unique way.

During this experience, you'll tackle key topics in cybersecurity:

- Terminal navigation: Learn to operate and navigate a system using basic commands.
- OSINT (Open Source Intelligence): Discover how to gather public information to identify potential threats.
- Web security: Understand common vulnerabilities in websites and how they are exploited.
- Cryptography: Familiarize yourself with the fundamentals of data and communication protection.

Peer learning and evaluation will play a central role in your journey. You'll exchange ideas, discuss solutions, and gain new perspectives by collaborating with your peers. This will not only enrich your learning experience but also help you build connections and develop critical skills for tackling future challenges.

Remember, this experience is as unique as you are: each participant will follow their own path, validate different projects, and face unique challenges. What truly matters is what you learn, from both your successes and your mistakes.

Good luck! We hope you enjoy this journey into the world of cybersecurity and collaborative learning.

Chapter II

Introduction

You've probably heard that "everything on the internet is public," but have you ever wondered just how far that information goes and how you can find it? OSINT (Open Source Intelligence) is the practice of exploring, collecting, and analyzing publicly accessible data to extract valuable insights.

In the digital world, learning to identify patterns, make connections, and analyze open sources will help you understand how information is generated and shared online. Beyond being just a simple Google search, OSINT is a skill that combines creativity, curiosity, and an analytical approach to decipher data and turn it into actionable knowledge.

The images we upload to social media contain more information than we might imagine. From metadata to visual matches, this exercise will teach you how to use specialized tools to analyze images and uncover revealing data.

What you'll learn in this exercise:

- Using tools for reverse image search.
- Methods to track an image across different platforms.

Chapter III

General instructions

Unless explicitly specified, the following rules will apply on every cell of this Discovery Piscine.

- This subject is the one and only trustable source. Don't trust any rumor.
- The assignments in a subject must be done in the given order. Later assignments won't be rated unless all the previous ones are perfectly executed.
- Be careful about the access rights of your files and folders.
- Your assignments will be evaluated by your Piscine peers.
- All shell assignments must run using `/bin/bash`.
- You must read the examples thoroughly. They can reveal requirements that are not obvious in the assignment's description.
- You have a question? Ask your neighbor on the left. Otherwise, try your luck with your neighbor on the right.
- Every technical answer you might need is available in the `man` or on the Internet.
- Remember to read the documentation and to use Slack!
- By Thor, by Odin! Use your brain!!!

Chapter IV

Exercise 02

	Exercise : 02
	Falcon
Turn-in directory : <i>ex02/</i>	
Files to turn in : flag.txt	
Forbidden functions : None	

The investigation is almost over, but we just need one more thing: The user location. Where is this guy hidden?? Unfortunately, we can't find it anywhere... Can you?

Chapter V

Submission and peer-evaluation

- Your task is to find the name of the town where this user is located.
- When you find it, you must write it into a `flag.txt` file.
- Write it as it appears on the [Wikipedia \(Spanish one\)](#).
- The `flag.txt` file should be located at `/tyto/ex02`.

Please note that during the evaluation, what we want to verify is that you have understood the exercise. You should be able to explain it and justify the decisions you made.
